Change of the product elma reinigungskonzentrat 1:9

Dear Elma customer,

we would like to inform you that within the context of an extensive revision of our cleaning chemistry portfolio the product name, the design of the labels and the colourant of elma reinigungskonzentrat 1:9 will change.

The name "elma reinigungskonzentrat 1:9" will be replaced by the **new description "ELMA RED 1:9"** and the design of the labels will change in the following way:

ELMA RED 1:9 has been slightly modified and optimized in the composition. We use a colourant with a higher heat and light stability. Therefore, the product is now light red. This change does not constitute a restriction on function.

This means that in future you will get proven cleaning performance and quality with a new name and a modern design.

Best regards,

Dr. T. Luchterhandt, Head of Chemical R&D
